Technical Skills

Languages:

JavaScript (ES6+) | **TypeScript** | HTML5 | CSS3 | SCSS | Java | C | Python

Libraries/Frameworks:

ReactJS | **NextJS** | **NodeJS** | **ExpressJS** | Tailwind CSS | Material UI | **Redux Toolkit** | ReactFlow | GrapesJS | REST | GraphQL | React Query | **Mongoose (ODM)** | **Prisma (ORM)** | JWT | Jest | Cypress | Mocha | Enzyme | AJAX | RxJS

Tools/Platforms:

Git/GitHub/GitLab | **Babel** | **Webpack** | **Postman** | **Figma** | SonarQube | Trivy | Docker | Kubernetes | CI/CD Pipelines | Chrome DevTools

Databases:

MongoDB | MySQL | PostgreSQL | SQLite | ElasticSearch | Redis

Concepts:

Core Computer Science Concepts:

Data Structures and Algorithms (DSA), DBMS, Operating System, Object-Oriented Programming (OOPS)

Architectures & Methodologies:

Microservice Architecture, Event-Driven Architecture, Camunda, Test-Driven Development (TDD), Behavior-Driven Development (BDD), Agile Methodologies, SOLID Principles, Design Patterns (MVC, Singleton, Factory)

Web Development Concepts:

Responsive Design, Web Accessibility (WCAG), Performance Optimization, API Security

Education

Vidyavardhaka College of Engineering (VTU)

2022

Bachelor of Engineering(BE) in Computer Science

India

– GPA: 9.42 / 10.00

Experience

Tecnotree Convergence Private Limited

Jan 2022 – Present (3years 4 months)

Senior Developer

- Led the design and architecture of scalable **Microservice applications**, using **ReactJS**, **NodeJS**, and **ExpressJS**, enabling the company to handle increased user load with minimal latency issues. Spearheaded the migration of legacy applications to modern, modular systems.
- Boosted overall application performance by optimizing **MongoDB queries**, cutting page load times by **30%**, and implementing **Redis** caching solutions. Reduced response times for key user actions by utilizing **Webpack** for more efficient asset bundling.
- Integrated **Microsoft Graph API** and **Mail API** to build a robust **Email Notification Service**, which improved email handling by 40%. Enhanced security by implementing **JWT** authentication, protecting sensitive user data across applications.
- Recognized by leadership for exceptional problem-solving skills, resolving 95% of critical issues within SLA timelines, driving 3+ technical innovations adopted organization-wide.
- Led scrum events with cross-functional teams of 10+ members, improving team collaboration and delivering projects 20% faster.

- Mentored a team of junior developers, providing guidance through **code reviews**, technical workshops, and one-on-one mentorship. Fostered a collaborative environment that led to a 15% increase in overall team productivity.

Developer

- Delivered high-quality web applications across 5+ projects by leveraging **JavaScript (ES6+)**, **TypeScript**, **HTML5**, **CSS3**, and **SCSS**, improving overall performance by 25%
- Modernized the user interface with **Tailwind CSS**, reducing design implementation time by 30%
- Streamlined data collection processes by developing dynamic forms using **Formio**, which resulted in a 25% improvement in form submission rates. Leveraged **GraphQL** for fast and efficient data querying
- Supported end-to-end testing for complex modules, achieving a 20% reduction in defect leakage post-release
- Improved documentation processes, increasing team collaboration efficiency by 15%, and ensured 100% clarity for feedback loops across 10+ critical application pages. Used **Postman** for thorough **API testing** and **Figma** for collaborative UI/UX design, ensuring alignment with product goals and user expectations

Projects

DAP (Digital Accelerator Platform) | *Underlying application platform which provides generic services to other applications*

- Utilized **GrapeJS**, an open-source web builder framework, and **ReactFlow** to implement interfaces for building HTML templates and workflows, resulting in a 30% improvement in workflow construction efficiency
- Developed a general, configurable email notification service in Java Spring Boot with a React UI for managing notification templates and settings
- Optimized the Workflow Initiator with ReactJS to design and execute task sequences, boosting performance by 40%. Leveraged JavaScript (ES6+) and TypeScript achieving a 35% increase in task processing speed

Digital Customer Life Cycle Management

- Implemented consumer-oriented features such as billing and subscription management using ReactJS and Node.js, contributing to a 25% improvement in customer experience and engagement, and a 15% increase in customer retention
- Designed robust order workflows with multi-step approvals, integrated CRM and inventory systems, and enabled real-time billing/order notifications using web sockets. Implemented fail-safe mechanisms to enhance reliability and minimize downtime

Identity and Access Management

- Designed API security models and built a custom UI interface for managing roles and permissions across the organization, increasing administrative efficiency by 20%
- Developed custom solutions and interfaces to integrate with WSO2, utilizing SCIM APIs for seamless user provisioning and management. This integration enhanced security context across applications, improving user authentication processes by 30% and reducing security-related issues by 25%

Unified Application Portal

- Migrated legacy application to the latest versions of Node.js and React, improving system performance by 50% and eliminating critical security vulnerabilities, reducing risk exposure by 45%
- Enhanced documentation processes for stakeholder feedback, incorporating tools like Postman and Wiki for thorough API testing. This initiative reduced response times for feedback by 30% and improved clarity for developers and stakeholders

Achievements and Activities

- Cause of applause for conducting POCs for stakeholders on the design of orchestration engine
- Won #10daysofcode at VVCE, Mysuru
- Led a team to secure Second Runner-Up at Codeathon, VVCE, Mysuru
- Organized Code-Combat and Codex-Runtime coding contests with the Code-Club, Mysuru
