Objective

Frontend Developer with 4 years of experience building high-performance, scalable, and secure enterprise web applications using React.js and modern JavaScript (ES6+). Specialized in modular UI architecture, reusable component systems, state management, and seamless API integrations within microservice ecosystems.

Proven track record of improving application performance by up to 50%, reducing security vulnerabilities by 45%, and enhancing workflow efficiency by 30%. Experienced in Agile environments, CI/CD pipelines, and collaborating with cross-functional backend, DevOps, and product teams.

Currently based in Dubai, UAE with a valid residence visa, seeking a Frontend Developer role to build modern, scalable, and user-centric digital platforms.

Technical Skills

Frontend Technologies: React.js, JavaScript (ES6+), TypeScript, Node.js, HTML5, CSS3, SCSS, Tailwind CSS, Material UI

UI Architecture & State Management: Redux, Context API, Component-Driven Architecture, Reusable Design Systems, Modular UI Development

Advanced UI & Integrations: REST APIs, GraphQL, WebSockets, JWT Authentication, ReactFlow, GrapeJS

Performance Optimization: Code Splitting, Lazy Loading, Memoization, Rendering Optimization, API Optimization, Browser Performance Tuning

Testing & Quality: Unit Testing, Integration Testing, TDD, Code Reviews, Debugging, Cross-Browser Compatibility

DevOps & Tools: Git, GitHub, GitLab, CI/CD Pipelines, Docker, Postman, Figma, Penpot, VS Code

Architecture & Security: Microservices Integration, OWASP Secure Coding Practices, RBAC, Secure Authentication Flows

Education

Vidyavardhaka College of Engineering (VTU)

2022

Bachelor of Engineering(BE) in Computer Science

India

– GPA: 9.42 / 10.00

Experience

Tecnotree Convergence Private Limited

Jan 2022 – Oct 2025

Senior Frontend Developer

- Architected scalable, component-driven **React** applications within an enterprise Digital Accelerator Platform supporting secure multi-tenant deployments
- Designed reusable UI libraries and modular frontend architecture, accelerating cross-application feature delivery
- Built advanced workflow builders using **React**, **ReactFlow**, and **GrapeJS**, improving workflow efficiency by 30%
- Optimized performance through memoization, lazy loading, and efficient state management, improving task execution speed by up to 40%
- Modernized legacy front-end systems to latest React standards, improving overall platform performance by 50%
- Implemented secure authentication and **RBAC** aligned with OWASP best practices, reducing vulnerabilities by 45%
- Integrated REST APIs, GraphQL, and WebSocket-based real-time communication within enterprise-grade systems

Frontend Developer

- Delivered responsive and scalable frontend solutions across 5+ enterprise applications using React, ES6+, SCSS, and Tailwind CSS
- Improved UI rendering performance by 25% through optimized state management and API handling
- Built dynamic, configurable form systems improving submission success rates by 25%
- Implemented secure validation flows and permission-based rendering across modules
- Collaborated with UI/UX, backend, and QA teams in Agile sprints, reducing defect leakage by 20%

Projects

Digital Accelerator Platform | In-House Workflow Orchestration Engine

- Architected and developed a visual, node-based workflow orchestration builder from scratch using **React** and **ReactFlow**, replacing an external third-party orchestration engine
- Enabled in-house workflow management, increasing platform flexibility and customization capabilities while reducing external dependency and vendor lock-in
- Engineered dynamic drag-and-drop node structures with configurable connections, conditional logic handling, and real-time state synchronization
- Designed extensible frontend architecture supporting reusable workflow templates and scalable node-type expansion
- Optimized rendering performance and execution visualization logic, improving workflow processing efficiency by up to 40%
- Implemented secure multi-tenant UI isolation and RBAC-driven access controls for enterprise-grade deployments

Digital Customer Lifecycle Management

- Developed scalable billing, subscription, and lifecycle management interfaces using **React**, improving customer engagement by 25%
- Built real-time order and billing notification systems using WebSockets with resilient error-handling mechanisms
- Designed secure API integrations ensuring data integrity across CRM and inventory systems

Identity and Access Management (IAM)

- Built enterprise-grade role and permission management UIs with structured RBAC enforcement
- Integrated **WSO2** via SCIM APIs for automated role provisioning and secure identity synchronization
- Implemented frontend security controls including permission-based routing and protected component rendering

Unified Application Portal (UAP)

- Designed and developed a centralized enterprise portal from scratch to unify multiple organizational products under a single secure platform
- Implemented Single Sign-On (SSO) integration with **WSO2**, enabling centralized authentication, secure token validation, and seamless cross-application session management
- Engineered secure redirection and session propagation mechanisms allowing users to access multiple products using common credentials
- Built modular, scalable React architecture to support dynamic product onboarding and future expansion
- Enforced role-based access control (RBAC) and secure routing to ensure controlled access across integrated enterprise systems

Achievements and Activities

- Received organizational recognition for leading POCs and architectural demonstrations for the in-house Workflow Orchestration Builder and Unified Application Portal (UAP) UI design and development
- Winner - #10DaysOfCode, VVCE, Mysuru
- Led a team to secure Second Runner-Up at Codeathon, VVCE, Mysuru
- Organized Code-Combat and Codex-Runtime coding contests under Code Club, Mysuru
